Introduction to the Half-Yearly Update

The Chicago Continuum of Care (CoC) System Goals represent the CoC’s collective aims. This report provides a system-level overview of the Chicago CoC’s performance. Each goal has metrics that measure progress towards that goal. The outcome data for each metric is calculated for the first six months of 2022. The outcomes data for 2020 and 2021 are included for comparison. For a detailed overview and method of calculation for each metric, visit the [CoC System Goals 2021 Report](#). Outcome data by breakdown category are included in this report under section, *Breakdown Categories for Outcomes Data*.

Breakdown Categories for Outcomes Data

Age, Chronic Homelessness Status, Ethnicity, Family Composition, and Race

In this section, each metric’s outcome data is broken down by categories: age, chronic homelessness (CH) status, ethnicity, family composition, and race. For more information about the categories, see the [CoC System Goals 2021 Report](#).

Age

The age breakdown groups participants into six age groups. The age groups are: less than 18, 18-24, 25-44, 45-64, greater than 64.

Chronic Homelessness Status

Individuals who are chronically homeless must meet the HUD definition of chronicity, which includes standards for both length of time a person experienced homelessness and that person’s disability status. For more information about how chronic homelessness status is defined and calculated, see the *Experiencing Chronic Homelessness* section of the [Chicago CoC Data Dictionary](#).
